

City Resilience Profiling Tool - Data

Context

geographical, historical, climate, population (density, distribution), land use, sub-local and supra-local divisions, green and blue spaces, economy, local government organization, etc.

Indicators

about 400 specific indicators of relevant aspects of the urban system. (e.g. street density, percentage of urban footprint located in hazardous areas, % of households connected to a wastewater network).

Challenges in data collection

- No data sources with detailed information at local level.
- No sharing culture inside local governments and with other stakeholders.
- Accuracy and reliability of information gathered from local sources.

Data sources

- SDG Indicators Database: <https://unstats.un.org/sdgs/dataportal/database>
- UN Data: <https://data.un.org/>
